## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments with respect to claims 1-58 have been considered but are moot in view of the new ground(s) of rejection.
2. Claims 59-68 have been added.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-68 are rejected under 35 U.S.C. 103(a) as being unpatentable over Corriveau et al. (6,038,449) in view of Wang et al. (6,178,164).

Regarding claims 1, 31 and 59-61, Corriveau discloses a radio access network (see fig.1, 10 and its description) comprising a serving radio network control node (see fig.1, element 18(1)) and a drift radio network control node (see fig.1, element 18(2)), a method comprising: determining that a target cell controlled by the drift radio network control node should be prepared for handover with respect to a user equipment unit (see fig.3A, step 116, element 16(1) col.5-6 and its description), the target cell being neighbored by a set of neighboring cells (see fig.1, element 32(1) and its description), the set of neighboring cells including a first subset of neighboring cells and a second subset of neighboring cells (see fig.1, element 32(2) and its description), a handover involving the user equipment unit being permitted for a cell of the first subset but not for

Art Unit: 2683

a cell of the second subset (see figs.1-3, element 32(1), 62, col.5-6 and its description), except for transmitting to the user equipment unit a message including a filtered list of cells. However, Wang discloses a method and apparatus for performing idle handoff in a multiple access communication system comprising transmitting to the user equipment unit a message including a filtered list of cells, the filtered list of cells including the first subset but not the second subset (see abstract, fig.1, elements 2 and 26A, col.7, lines 59-65, figs.3A-D and its description). Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use the Wang's technique in Corriveau's invention to improve method and apparatus for performing handoff in a multiple access communication.

Regarding claims 2-5, 7-19, 21-25, 27-30, 32-34, 36-48, 50-54, 56-58, and 62-68, Corriveau further discloses all limitations in claimed (see figs.2-3, 62, 74 and its description).

Regarding claims 3 and 35, Corriveau discloses all the subject matters described in rejected claims above, except for the identification of the user equipment unit is the International Mobile Subscriber Identifier (IMSI) of the user equipment unit. However, IMSI is well known in mobile telephone network using to identify a subscriber to mobile international telephone services.
